

Using i>clicker with both Mac and PC

1. Rename your *iclicker Win* folder to *iclicker Win-Mac*.

Name	Date modified
iclicker Mac v6.1	6/14/2012 3:04 PM
iclicker WinMac v6.1	6/14/2012 3:26 PM

2. **Using a Mac**, copy the *i>clicker*, *i>grader*, and *WebUpdate* application files from the *i>clicker Mac* folder to the *iclicker Win-Mac* folder you renamed.

3. Going forward, always use the *iclicker Win-Mac* folder. Both applications will access the same data from your *Classes* folder.

If you're also using i>clicker Integrate with your LMS...

4. **Using a Mac**, drag the CMS Integrate Wizard (.app) file from the *Resources* folder in *i>clicker Mac* to the *Resources* folder within *iclicker Win-Mac* (the folder you renamed in step 1).

Once you drag *CMS Integrate Wizard.app* over, **your *iclicker Win-Mac* > *Resources* folder should contain exactly 8 items:** *CMS Integrate Wizard Libs*, *CMS Integrate Wizard.app*, *CMS Integrate Wizard.exe*, *CMS_Wizard.xml*, *Config.xml*, *Help_Master.xml*, *Seed_Demographics.xml*, *Web_Voting_Config.xml*.

- 📁 CMS Integrate Wizard Libs
- 📄 CMS Integrate Wizard.app
- 📄 CMS Integrate Wizard.exe
- 📄 CMS_Wizard.xml
- 📄 Config.Xml
- 📄 Help_Master.xml
- 📄 Seed_Demographics.xml
- 📄 Web_Voting_Config.Xml
